

New area for users: advisory information on the H2O-home page

Steinen. No two industrial wastewaters are alike. Therefore the H2O GmbH has now published on the company's website a comprehensive user area especially for industrial productions. Here interested persons can obtain a first overview of the relevant and decisive technologies in the wastewater treatment. Additionally exciting field reports show how vacuum distillation systems work in practice.

The area is divided according to the content of the respective process wastewater. This enables the users an easy orientation and leads them quickly to the required information.

For example, in the article dealing with parts cleaning great importance is attached to the quality of the treated water, whereas the area on the topic cleaning of containers deals more with the challenge of continually changing wastewater contents. How the metalworking industry may obtain almost oil-free, crystal-clear distillate is the topic of the menu item cooling lubricant emulsions. More interesting articles are available on wastewater from the crack testing, the pre-painting treatment, the die casting, the vehicle cleaning, the electroplating, from finishing processes, the stainless steel pickling and on highly loaded landfill leachate.

The information area for users is available in five languages: German, English, Spanish, French and Swedish. You find it under www.h2o-de.com

About H2O GmbH – The experts for zero liquid discharge from the H2O GmbH are worldwide technological leaders in the field of efficient and reliable vacuum distillation systems for the processing and recirculation of industrial wastewater. Thanks to a modular composed technology, each system is tailored individually according to the customer's needs. More than 25 years of experience lead to exceptional products, which set technological standards.

Since the spin-off of the Mannesmann Demag Group in 1999 the owner managed H2O could win a growing number of loyal customers who appreciate the scope of services of the H2O. The turnover increased since the foundation on an average of 15 percent up to 16 million Euro in the year 2014. The H2O employs today more than 95 colleagues worldwide, thereof 80 at the head office in Baden Steinen.
