

Shape the future together with a German Engineering company and join our team:

Project Engineer (m/f)

For our branch office in Kunshan, Jiangsu province, China we are looking for a Project Engineer for the project planning of our vacuum distillation systems and support the engineering department.

Your tasks:

- Monitoring of the project progress between order transfer and commissioning
- Check the configuration in terms of process and component selection
- Customer care after project developing
- Service support by telephone and solving problem for customer locally
- Interface to sales, purchasing and service

Your profile:

- University degree (Bachelor) of Process engineering, mechanical engineering or a comparable technical education
- Ideally several years of working experience in field of industrial water treatment and / or engineering
- Experience with mechanical and chemical processes of industrial water treatment
- Basic knowledge of measuring technology in the field of water treatment
- Good knowledge of English and ideally another foreign language
- Self confidence in dealing with customers and suppliers

We offer:

Apart from performance-linked basic-compensation you can get up to three monthly salaries as bonus compensation for achievement of personnel objectives and the business success.

Advanced training:

A good and specific training is a very important part of our philosophy and our Human Resources development.

We are:

H2O is the leading producer of energy-efficient vacuum distillation units for the recycling of industrial waste water in Europe and has more than 90 employees at the moment. We believe in a future of an industry without waste water. That is why we are working to become the N°1 worldwide to realize a production without waste water.

Interested?

We are looking forward to receiving your application in German or English language containing salary expectations and your earliest possible date to join us.
