

No wastewater, no inspections by the authorities: H2O GmbH at Pollutec in Lyon

Crystal-clear water which can be reused in your production process: This is achieved by VACUDEST vacuum distillation systems. They convert 100% wastewater into up to 98% reusable distillate. The decisive advantage for French industry: With these wastewater treatment systems, users will be free from inspections by the water authority. After all, no wastewater also means no environmental pollution.

How this works exactly in different industrial production lines will be clarified by experts for zero liquid discharge production from H2O GmbH at the Pollutec environment technology trade fair in Lyon at stand 5-F156. The trade fair opens its doors from 27 to 30 November 2018.

Wastewater from all industrial sectors with a volume from 180 to 30,000 cubic metres is suitable for VACUDEST systems.

Further information is available at Pollutec or the company homepage at www.h2o-de.com.

About H2O GmbH – H2O GmbH nowadays forms part of the worldwide most experienced experts in the sustainable treatment and recirculation of industrial wastewater. With its efficient and safe VACUDEST vacuum distillation systems they achieve wastewater-free production for customers in more than 50 countries throughout the world.

Since the spin-off from Mannesmann Demag in 1999 H2O has, as an owner-operated company, been able to gain a growing number of loyal customers. More than 100 employees contribute to achieving this high customer satisfaction level from the headquarters in Steinen in south Germany and in the subsidiaries in Switzerland, Poland and China.
